PROFESSIONAL SUMMARY

Backend Software Engineer with hands-on experience building RESTful APIs and full-stack applications using Node.js, Express.js, MongoDB, and React. Skilled in designing CRUD architectures, implementing JWT-based authentication, and working confidently in Linux environments with Git-based version control. Strong foundation in Data Structures, Object-Oriented Programming, and SQL, with a growing interest in building scalable, production-ready backend systems.

TECHNICAL SKILLS

Programming Languages: C++, JavaScript, Python, SQL

Backend: Node.js, Express.js, REST APIs, MongoDB, JWT Authentication, Middleware, CRUD APIs

Frontend: HTML5, CSS3, Tailwind CSS, React

Databases: MongoDB, SQL

Operating Systems: Linux (Fedora, Arch Linux, Hyprland), Package Management, Bootloader Basics

Developer Tools: Git, GitHub, Bash, Shell Scripting, VS Code, System Troubleshooting

EXPERIENCE

Full Stack Engineer Intern — Jaipur Engineers

Apr 2026 – Jul 2026 | Jaipur

- Working on full stack web development using modern technologies across frontend and backend.
- Building and deploying web applications with integrated frontend and backend components.
- Developing REST APIs and handling database operations for real-world projects.
- Collaborating with a team following structured development workflows, including Git-based version control.
- Debugging, testing, and optimizing application performance to deliver functional, scalable features.

Full Stack Web Development Intern — Future Interns

Jun 2025 – Jul 2025 | Remote (India)

- Selected for a remote Full Stack Web Development internship focused on real-world projects.
- Gained hands-on experience with HTML, CSS, JavaScript, and full-stack development concepts.

PROJECTS

Full Stack Text Editor | React, Tailwind CSS, Node.js, Express.js, MongoDB

- Engineered a full-stack text editor with a decoupled React frontend and Express.js backend, following a modular and maintainable architecture.
- Developed 10+ RESTful API endpoints supporting complete CRUD operations for creating, updating, retrieving, and deleting documents.
- Integrated MongoDB for persistent document storage with efficient schema design and optimized database interactions.
- Built reusable React components to improve maintainability and reduce duplicate UI code by approximately 30% across the application.
- Implemented client-server communication using asynchronous API requests, enabling seamless real-time document management.
- Applied structured error handling, input validation, and clean project organization to improve application reliability and code quality.

FastAPI + MongoDB API Project | FastAPI, Python, MongoDB

- Designed and developed a scalable backend application using FastAPI with a modular architecture for improved maintainability.
- Built 10+ REST API endpoints supporting CRUD operations with efficient request routing and structured response handling.
- Implemented Pydantic models for request validation, improving API data consistency and reducing invalid payload processing by approximately 25%.
- Integrated MongoDB for efficient data persistence with well-structured collections and optimized database queries.
- Organized the project into reusable modules, improving code readability and simplifying future feature development.
- Followed REST API best practices, including proper HTTP status codes, exception handling, and JSON response formatting for a production-ready backend structure.

EDUCATION

Bachelor of Computer Applications (BCA)

Poornima University | Expected Graduation: 2027

CERTIFICATIONS

- Python Complete Course and Flask Framework, HTML Essentials — Udemy (Apr 2025)
- Networking Fundamentals on Google Cloud — Google Cloud Skill Badge (Oct 2024)
- Get Started with Cloud Storage — Google Cloud Skill Badge (Oct 2024)

ACHIEVEMENTS

- Secured 4th Rank in the Digital Campus 2.0 Google Cloud HackSprint, organized by Poornima Institute of Engineering & Technology in collaboration with Google Cloud (Nov 2024).
